```

WPI; 2000-171458/15.

PT New multiprotein complex which can modulate peptidyl transferase activity of during translation, useful to treat diseases associated with peptidyl transferase activity e.g. Duchene/Becker Muscular Dystrophy.

XX Example 1; Fig 1; 89pp; English.

XX Example 2; Fig 1; Fig 1;

0

```
cc involving a defect in the complex, by transfecting cells with encoding cnucleic acid and determining the proportion of defective complex before and after transfection. It is also useful to screen for drugs involved in cell transfers experience activity during translation, inhibiting the competidyl transferse activity during translation, inhibiting the contermination. Vectors comprising polynucleotides encoding translation cells to termination. Vectors comprising polynucleotides encoding the complex (or continued with complex expression and so modulate the efficiency of translation termination of mRNA and/or degradation of aberrant conditions and included in therapeutic compositions useful as above, and/or used to modulate peptidyl transferse activity during translation translation of cells. They care also useful to modulate the efficiency of translation translation of cells. They care also useful to modulate the efficiency of translation of aberrant compositions modulating binding to MTTI, useful to identify genes.

CC Sequences AAY7813-817 represent protein fragments from yeast superfamily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SXS
                   The invention relates to a method of identifying a test composition that CC modulates the efficiency of translation termination comprising contacting Ct the RNA helicase MTT1 with a composition or agent under conditions CC permitting binding between the MTT1 and the composition, detecting specific binding of the test composition or agent to the MTT1. The CC composition and methods are useful for modulating the fidelity of CC translation termination or for identifying agents that: affect the CC translation termination event, promote degradation of aberrant C transcripts, and provide modulators (inhibitors/stimulators) of peptidyl C transferase activity during initiation, elongation, termination amany activity during initiation, elongation, termination and mRNA degradation of translation. The agents, which may be antagonists or agonists, are useful in screening, diagnostic and therapeutic purposes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    such as beta-thalassaemia, beta-globin, Duchenne/Becker Muscular Dystrophy, Haemophilia A, Haemophilia B, Von Willebrand Disease, Osteogenesis Imperfecta, Breast Cancer, Ovarian Cancer, Wilms Tumour, Hirschaprung disease, Cystic fibrosis, Kidney Stones, Familial hypercholesterolaemia, Retinitis Pigmentosa, or Neurofibromatosis, Retinoblastoma, ATM or Costmann Disease. The present sequence represents the amino acid sequence of the yeast helicase Mttl.
                                                       The invention relates to a method of identifying an agent that increases nonsense suppression, by contacting modulator of translation termination (MTT1) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae motif peptide
                                                                                                                                                                                                                                                                                                                                           Identifying an agent that increases nonsense suppression, fo therapy, by contacting modulator of translation termination Saccharomyces cerevisiae with a test agent, and detecting sp binding to Mttl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Saccharomyces cerevisiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Saccharomyces

                                                                        The invention relates to a method of identifying a test composition that modulates the efficiency of translation termination comprising contacting the RNA helicase MTI1 with a composition or agent under conditions permitting binding between the MTI1 and the composition, detecting specific binding of the test composition or agent to the MTI1, and determining if the test composition or agent inhibits the MTI1. The composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the functional activity of mRNAs by altering frameshift frequency, permit monitoring of a termination event, promote degradation of aberrant transcripts, and provide modulators (inhibitors/stimulators) of peptidyl reansforms activity divide modulators (inhibitors/stimulators) of peptidyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a test composition or agent that translation termination comprises contacting composition or agent, and determining if the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    frameshift frequency; aberrant transcript degradation; peptidyl transferase modulation; beta-thalassaemia, beta-globin; puchenne/Becker Muscular Dystrophy; Haemophilia A; Haemophilia B; Duchenne/Becker Muscular Dystrophy; Haemophilia A; Haemophilia B; Von Willebrand Disease; Osteogenesis Imperfecta; Breast cancer; Von Willebrand Disease; Osteogenesis Imperfecta; Breast cancer; Ovarian Cancer; Wilms Tumour; Hirschaprung disease; Cystic fibrosis; Kidney Stone; Familial hypercholesterolaemia; Retinitis Pigmentosa; Kidney Stone; Familial hypercholesterolaemia; Retinitis Pigmentosa;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Saccharomyces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene therapy; translation termination; RNA helicase; MTT1;

The present sequence represents the amino acid sequence of the yeast translation termination modulation
                                                    The invention provides a new multiprotein complex which can modulate peptidyl transferase activity during translation. The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact and carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) 1 and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It can be administered therapeutically combined with a carrier in pharmaceutical compositions to treat diseases associated with peptidyl
                                                                                                                                                                                                                                                                           New multiprotein complex which can modulate peptidyl transferase activity during translation, useful to treat diseases associated with peptidyl transferase activity e.g. Duchene/Becker Muscular Dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Helicase B; HCSB; MTT1; modulator of translation termination; eRF1 eukaryotic release factor; peptidyl transferase; beta-thalassemia; beta-globin; Duchene/Becker Muscular Dystrophy; antianemic.
   transferase activity, especially diseases resulting from a nonsense or frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker Muscular Dystrophy etc. It can be used to identify disease conditions
                                                                                                                                                                                                                                         Claim 37;

Vectors comprising polynucleotides encoding the complex (or contisense sequences) can be constructed and introduced into cells to interfere with complex expression and so modulate the efficiency of translation termination of mRNA and/or degradation of aberrant continued in therapeutic compositions useful as above, and/or used to modulate peptidyl transferase activity during translation in cells. They are also useful to modulate the efficiency of translation termination of transcripts in cells. The method can be used to identify agents/compositions modulating binding to MTT1, useful to identify genes. Sequences AAY77804-812 represent motifs I-IX comprised in the genes of interest, used for modulating translation termination.

The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae consensus motif peptide.
The invention relates to a method of identifying a test composition that modulates the efficiency of translation termination comprising contacting the RNA halicase MTT1 with a composition or agent under conditions permitting binding between the MTT1 and the composition, detecting specific binding of the test composition or agent to the MTT1, and determining if the test composition or agent inhibits the MTT1. The composition and methods are useful for modulating the fidelity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-JUL-1998;

```

The invention relates to a method of identifying an agent that increases nonsense suppression, by contacting modulator of translation termination (MTT1) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae consensus peptide

Matches 6
                                                         the RNA helicase MTT1 with a composition or agent under conditions permitting binding between the MTT1 and the composition, detecting specific binding of the test composition or agent to the MTT1 and detecrmining if the test composition or agent inhibits the MTT1. The composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the functional activity of mRNAs by altering frameshift frequency, permit monitoring of a termination event, promote degradation of aberrant transcripts, and provide modulators (inhibitors/stimulators) of peptidyl transferase activity during initiation, elongation, termination and mRNA degradation of translation. The agents, which may be antagonists or agonists, are useful in screening, diagnostic and therapeutic purposes,
